ESTABLISHMENT OF NETWORK CONNECTIONS

5

ABSTRACT

Connection of a client browser to a server hosting a sub-page in a website via a link from a principal page at a higher level in the hierarchy of pages is established by

10   actuation of a link sent to the client with the principal page. The link includes a signifier unique to a given server on which the sub-page is hosted, so that resolution of the URL in the link need not be performed dynamically at the server side.
